## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to Soft Decision Information for Producing Reliability Information by Combining Soft Decision Information with Knowledge regarding a Finite State Machine, classified in class 714, subclass 780.
- II. Claims 2-32, drawn to Maximum Likelihood Decoding using Forward and Backward Metrics, classified in class 714, subclass 794.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, Soft Decision Information for Producing Reliability Information by Combining Soft Decision Information with Knowledge regarding a Finite State Machine, and Group II, Maximum Likelihood Decoding using Forward and Backward Metrics, are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination, Group I, Soft Decision Information for Producing Reliability Information by Combining Soft Decision Information with Knowledge regarding a Finite State Machine, as claimed does not require the particulars of the subcombination, Group II, Maximum Likelihood Decoding using Forward and Backward Metrics, as claimed because the combination Group I has separate utility such as in a

any iterative decoding device such as a Viterbi decoder using the step of combining said input soft decision information with knowledge regarding said finite state machine. The subcombination has separate utility such as in maximum likelihood decoding using forward and backward metrics.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Kenneth Allen on 17 March 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

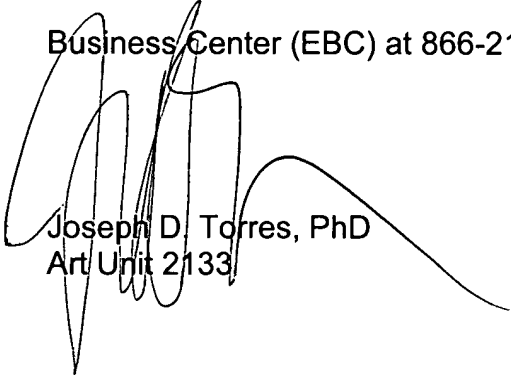

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph D. Torres whose telephone number is (703) 308-7066. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached on (703) 305-9595. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
